

3 EMPLOYEE BEHAVIORS THAT PUT COMPANIES AT RISK

RISKY BROWSING

Employees often use work devices for personal web browsing. This increases the risk of employees accessing and downloading malicious content on work devices.

UNSAFE PASSWORDS

The use of unsafe passwords, or the same password across accounts, can make devices or accounts easy to hack. Use strong passwords and two-factor authentication where possible.

PHISHING LINKS

Don't click suspicious links! Scammers disguise malicious links in very legitimate looking emails. Be vigilant, and only click links sent from verified trusted sources.
