Think Before You Click

Email is a leading threat to organizations, and the cause of many data breaches.
Think before you click on that email link!

Make sure you have selected the correct recipient(s). Don't accidentally email private information to the wrong people.

Make sure the email is truly from a trusted source. Many phishing scammers spoof email addresses to make you think it's someone you trust.

Don't click suspicious links. Clicking email links from untrusted sources can install malware onto your computer or trick you into giving information to criminals.
