

# Malware Can Hide Anywhere Don't Get Tricked!

Cyber threats don't always look scary. Malware can disguise itself as innocent files, fake updates, and even links from people you know. Stay cyber safe with good hygiene.

## How to Stay Cyber Clean:

-  Think Before You Click – Don't open attachments or links unless you trust the source.
-  Update From Official Sources – Always install updates from verified vendors.
-  Use Security Software – Keep antivirus and anti-malware protection active.
-  Scan External Devices – Run a security check before using USBs or hard drives.
-  Stay Aware – If it looks suspicious, it probably is!
